

Homework assignment about window subclassing

 devblogs.microsoft.com/oldnewthing/20031110-00

November 10, 2003

Raymond Chen

Window subclassing is trickier than you think. Consider this code sketch:

```
// Subclass the window for a little while
WNDPROC OldWndProc = SubclassWindow(hwnd, NewWndProc);
... do stuff ...
// Okay all done, remove our subclass by
// restoring the previous window procedure
SubclassWindow(hwnd, OldWndProc);
```

What could go wrong? We'll discuss it tomorrow.
