December 12, 2008

Raymond Chen

The [Web page associated with my PDC 2008 talk](#) has been updated to include the source code that I used for all of the demos.

Other remarks:

- When I wrote, “If you know what’s good for you, don’t actually use a title image,” that was in the context of using group descriptions. If you watch the video, you’ll see that if you give a group description a title image, the title image is drawn on top of the text, which is, not to put too fine a point on it, hideous. If you’re going to go down the road of using the total information overload of group descriptions, at least use a blank title image. Of course, if you’re not using group descriptions, then go ahead and use title images; they look fine on their own.
- [James Senior](#) posts [more monkey facts](#) about the PDC as well as a [time lapse video of the keynote room being set up and torn down](#).
- [Xirrus](#) issued a [press release on how their devices were used to provide record-setting wireless connectivity at the PDC](#).
- [Jon Galloway](#) gives a behind-the-curtain look at [how the microsoftpdc.com Web site was built](#).
- In case you didn’t know, [Windows 7 Developer White Papers](#) are available for download. New white papers are added to the list every so often, so it’s worth another look.
