2008 year-end link clearance

December 31, 2008

Raymond Chen

Time for the semi-annual link clearance.

- It appears that the <u>Snipping Tool</u> is <u>also available for Windows XP</u>.
- How to beat the no-fly list: <u>Change your name</u>.
- How to beat the low printer ink sensor: <u>electrical tape</u>.
- Learn about <u>Milliways</u>, the unfinished sequel to the adventure game <u>The Hitchhiker's</u> <u>Guide to the Galaxy</u>. It's a fascinating insight into how these sorts of games are built.
- Saw a link to this program, looks useful, haven't tried it though. <u>Mp3 Knife</u> is a simple tool which extracts clips from mp3 files.
- I don't have a Bluetooth-enabled laptop yet, but someday I may, and then <u>I'll give the bitpim program a whirl.</u>
- One of the most awesome music videos from the 1980's gets even more awesome: <u>Take On Me: The Literal Lyrics Version</u>. (My favorite throwaway line: "What kind of hallway is this?") <u>MSNBC interviews the creator</u>.
- The <u>guys behind the Mentos and Diet Coke fountain video</u> strike again: <u>Having fun with</u> Post-It notes.
- <u>An Engineer's Guide to Cats</u>: "Like most engineers, cats are pretty much willing to eat the same thing day after day after day."
- <u>Preview PDF files directly from Outlook</u>.
- Timewasting game: <u>Fantastic Contraption</u>.
- Timewasting game #2: <u>Light Bot</u>.
- <u>Not Fooling Anybody</u>.
- <u>The curse of competence</u>.
- Dilbert invented <u>the carbicle</u>. Back in the early 1990's, a bunch of us invented something similar to the carbicle at the lunch table. Though our version was a lot lamer because these were the days before wireless networking, mobile phones, LCD monitors, and notebook computers you would actually be caught dead with.
- <u>SafeCatch thwarts two potential bank robberies</u> a few months ago. (<u>Earlier coverage</u>.)
- The travel site <u>Yapta</u> will alert you when frequent-flyer seats become available on flights you care about, giving you a better chance to <u>spend those miles before they expire</u>.
- <u>Digitally Assisted Billiards</u> [via]. But even with this, I'd probably still lose.

- Another glimpse into a mystery world: the tunnels beneath Las Vegas.
- Another glimpse into a mystery world: <u>The people who hate cilantro</u>.
- <u>Earl Pomerantz</u> does it again with his simple storytelling: *Too Big For My Bathing Suit* Part 1 and Part 2.
- Exploiting Multi-Core Processors in Windows Vista, a quick overview.

Finally, we have the traditional plug for my column in <u>TechNet Magazine</u>:

- <u>History taking up space</u>. The original title for this article was <u>What about Bob?</u> Bonus trivia: The code name Utopia was actually an acronym. It stood for (I am not making this up) Unified, Task-Oriented, Personality-Infected, Active.
- The dying breath of the Alpha AXP was not breathed in vain: The archivist who rolled the computer out of its dusty closet for the photo shoot quipped, "I'm considering filing a workmans comp claim now. That thing has terrible handling and zero drivability!" If you look at the picture, you can see a layer of dust. We left it there just for old time's sake. And here are some supplementary links for the article.
- <u>Windows 95 Unplugged</u>.
- Work Harder, Not Smarter.
- <u>Windows Can but Won't</u>. Replacing a file in use is the easy part. Getting it to work is the hard part.
- <u>Keep Your Caches Close</u>. The original title was <u>Keep your data close and your caches closer</u>, but that had to be trimmed for space.
