

If there's a problem with a wiki, then you can fix it; that's why it's a wiki

Raymond Chen

On an internal mailing list, somebody asked a question about how to do X with Y, and I replied with a link to an internal wiki that described how to do X with Y (answer: use the Z tool). Somebody else replied, “Time to update that article because the link to the Z tool is broken.” Apparently, this person forgot that one of the defining characteristics of a wiki is that it’s easy to edit. (Another characteristic is that it is collaboratively-edited; there is no central authority.)

In other words, if you see something wrong, *fix it yourself*. Don’t just stand around saying somebody should do something. Be someone. Because on a wiki, there is no default value for *somebody*.
