December 25, 2012

Raymond Chen

I'm going to be lazy today and make you solve the problem.

Did a recent security hotfix change the way we handle UNC paths with spaces?

Normally, if we open the *Run* dialog and type `\\server\share\Support Library\`, the `Support Library` folder opens. But recently it stopped working. Instead of opening the `Support Library` folder, we get the *Open With* dialog:

Open with

Choose the program you want to use to open this file:

File: Support

 Contoso Chess Challenger 5.0

 Contoso Music Studio

 Fabrikam Chart 2.0

 Litware 2010

 Woodgrove Bank Online

Happy Holidays!

Always use the selected program to open this kind of file

Can you figure out what happened recently that introduced this problem? You have all the information you need.
