What happens if I don't pass a pCreateExParams to CreateFile2?

The final `pCreateExParams` parameter to the `CreateFile2` function is optional. What happens if I pass `NULL`?

If you pass `NULL` as the `pCreateExParams` parameter, then the function behaves as if you had passed a pointer to this structure:

```
CREATEFILE2_EXTENDED_PARAMETERS defaultCreateExParams =
{
 sizeof(defaultCreateExParameters), // dwSize
 0, // dwFileAttributes
 0, // dwFileFlags
 0, // dwSecurityQosFlags
 NULL, // lpSecurityAttributes
 NULL, // hTemplateFile
};
```
