Last time, we looked at [the legacy icons in progman.exe](#). But what about moricons.dll?

Here's a table of the icons that were present in the original Windows 3.1 moricons.dll file (in file order) and the programs that Windows used the icons for. As with the icons in progman.exe, these icons are mapped from executables according to the information in the APPS.INF file.

Maybe seeing these program names will bring back a wave of nostalgia. Or maybe you'd rather forget that any of these ever existed.
