Spear Phishing Attacks

Spear phishing is on the rise—because it works. Cyber criminals have moved from broad, scattershot attacks to advanced targeted attacks like spear phishing. This has proven to be highly effective with serious consequences to victim organizations, requiring enterprises to find a way to more effectively combat evolving threats.

In this white paper, you will find:

- An overview of spear phishing and its characteristics
- A case study on spear phishing
- Key capabilities organizations need to effectively combat spear phishing threats
