The FBI issues alert to warn enterprises about LockerGoga and MegaCortex ransomware

The actors behind the two ransomware were found using stolen login credentials, SQL injections, phishing attacks, and several other techniques to gain entry into a corporate network

The FBI has issued an alert to warn enterprises about LockerGoga and MegaCortex ransomware that are targeting large organisations and businesses in western countries. "Since January 2019, LockerGoga...

Interview: Sunlight, AI & Machine Learning Awards finalist

"Sunlight was born out of a collaboration with ARM in 2013 and that was to build a lightweight hypervisor that could really efficiently virtualise low power and embedded processor platforms"
