

CyberX is now a Microsoft company.

cyberx-labs.com/blog/deep-dive-into-the-lyceum-danbot-malware/

In 20 seconds you will be redirected to the Microsoft website, where you can learn about the agentless IoT/OT security capabilities of Azure Defender for IoT— including asset discovery, vulnerability management, and continuous threat monitoring. Incorporating IoT/OT-aware behavioral analytics from CyberX, Defender for IoT integrates with existing SOC tools and is available for both on-premises and cloud-connected deployments.
