Update From Decathlon: “On May 27, 2024, our cybersecurity teams in Spain became aware that data containing email addresses belonging to employees of Decathlon Spain was allegedly being offered for sale online. Upon initial analysis, it has been confirmed that this data originated from a third-party application and that only emails of Spanish employees are

concerned. No passwords or other data appear to be included in the set. We can also confirm that no customer data was impacted. We are committed to ensuring the privacy and security of all our employees.”

Cybersecurity experts have weighed in on the situation, emphasizing the importance of robust security measures for large retailers.

Decathlon could face significant legal and financial repercussions if the breach is confirmed.

This includes:

- Changing passwords for their Decathlon accounts and any other accounts using the same password.
- Monitoring bank and credit card statements for any unauthorized transactions.
- Be cautious of phishing emails or messages attempting to exploit the situation.

As the situation develops, how Decathlon will respond to these serious allegations remains to be seen.

The company must conduct a thorough investigation to determine the extent of the breach and implement measures to prevent future incidents.
